Injury and Incident Trend Analysis

An injury and incident trend analysis will be performed periodically by the Safety Director in conjunction with the insurance provider's Loss Control Consultant to identify any trends in losses that may exist. The analysis will include a review of at least the following:

- Near Hit Reports
- Employee Safety Recommendations
- Worker's Compensation claims
- Incident Investigations
- the OSHA 300 log

This analysis can identify potential areas of improvement within the safety program and any additional employee training that may be needed.
